

[Trello] Tableau Kanban

The screenshot displays a Trello Kanban board for a project named "Projet Arcadia". The board is organized into several columns representing different stages of the workflow:

- Backlog:** A vertical list of 11 user stories (US 1 to US 11) with progress indicators (e.g., 5/5, 1/1, 3/3).
- À faire:** A column for tasks to be done, currently empty.
- En cours:** A column for tasks in progress, currently empty.
- Test:** A column for testing, currently empty.
- Terminé:** A column for completed tasks, containing three items related to database and environment preparation.
- Fusionné dans la branche principale:** A column for tasks merged into the main branch, containing a list of API endpoints and UI-related tasks.

The interface includes a top navigation bar with the Trello logo, workspace name, and various filters. The board itself has a dark green background with light green columns. Each card in the backlog and the merged branch column has a green progress bar and a small icon.
